ABOUT ME

I am a creative full-stack developer with solid background in building scalable web applications. My skills span front-end technologies like JavaScript and modern frameworks, as well as back-end development in Java, databases, and architectural patterns. With strong foundations in object-oriented programming and scalability, I deliver solutions that balance performance and user experience. My problem-solving abilities and experience managing small teams ensure projects are completed with

EXPERIENCE

Digital Communications & Web Specialist {

Cértoma - Wood Processing Industry

June 2023 – Present

Manage company communication, website content, and product photography.

Lead social media strategies, enhancing brand presence across social media.

}

Vice President for Communication and Image {

Academic Association of the University of Aveiro

Jan 2019 – Jan 2021

Led a team to manage internal and public communication for the institution with implementation of new strategies.

}

Sales Assistant {

Vodafone

Feb 2018 – Sept 2020

Achieved strict monthly sales targets in a high-pressure environment.

Adapted to fast-paced conditions.

}

EDUCATION

32-Week Full-Stack Coding Bootcamp (Java & JavaScript) {

Code for All, 2024

Completed an intensive and immersive program, gaining hands-on experience in building scalable web applications using both front-end and back-end technologies.

}

Degree in Design (Half completed) {

University of Aveiro, 2017

I explored various aspects of design but was drawn to the structured problem-solving and immediate feedback of programming. My design background enhances my front-end work, particularly in user experience and interface design.

}

- * Spring MVC
- * Spring Boot
- * Hibernate
- * JUnit
- * Mockito
- * Node.js

}

- * jQuery

SimpleGraphicsGFX

}

Tools & Technologies {

- * IntelliJ IDEA
- * VS Code
- * Git
- * VIM
- * Apache Tomcat
- * Maven
- * Thymeleaf
- * AJAX
- * REST API

}

PROJECTS

My Personal Portfolio (SPA){

A responsive portfolio built with React, featuring GitHub API integration to showcase repositories, dynamic animations, and a modern design. Includes multilingual support via Google Translate.

}

Dungeon Crawler Game {

A 2D top-down dungeon crawler built in Java featuring randomly generated dungeons, a combat system, and an inventory to manage collected items. Each playthrough offers a unique experience with increasing difficulty and persistent high scores.

}
